

Requirement Analysis

Data Flow Diagram & User Stories

Date	09 September 2026
Student Name	Jetti Harika
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	

Data Flow Diagram

The DFD below represents only the request flow described in the supplied project instructions: requester submission through Service Portal, catalog/variables, Flow Designer automation, Network Database record creation, approval, email notification, and status update.

Actor / Component	Data / Action	Next Component
End User / Requester	Accesses Service Portal → searches Network Requests → fills required details → submits request	Network Request Catalog Item
Network Request Catalog Item	Collects catalog variables and variable-set information	Flow Designer
Flow Designer	Get Catalog Variables → Create Record → Send Email → Ask for Approval → If/Else → Update Record	Network Database / Approval Request
Network Database	Stores request details and Approval Status	Approver / Status Tracking
Approver	Reviews approval request and approves/rejects according to configured approval rules	Flow Designer
Email Notification	Communicates request progress to configured recipients	Relevant stakeholders

Automated Network Request Management — Data Flow Diagram

Flow: Requester → Service Portal → Catalog Item → Variables → Flow Designer → Record / Approval / Notification → Status

Figure 1: Request data flow for Automated Network Request Management.

User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
End User (Requester)	Network Request Submission	USN-1	As an end user, I can access Network Requests through the Service Portal and submit a network service request.	Network Request item is accessible and a request can be submitted with required details.	High	Release-1
End User (Requester)	Request Details	USN-2	As an end user, I can provide the required network request details through the catalog form.	Required variables are available and mandatory information can be entered.	High	Release-1
End User (Requester)	Dynamic Form	USN-3	As an end user, I can see the Existing ID field when Type of Connection is Existing.	Existing ID becomes visible when the configured condition is met.	Medium	Release-1
End User (Requester)	Request Tracking	USN-4	As an end user, I can view the request approval status.	Approval Status is maintained on the Network Database record.	Medium	Release-1
IT Admin	Automation	USN-5	As an IT admin, I can automate the network request lifecycle using Flow Designer.	Configured flow executes the specified actions after catalog submission.	High	Release-1
IT Admin	Data Record	USN-6	As an IT admin, I can create a Network Database record from the submitted catalog variables.	Create Record populates the specified Network Database fields.	High	Release-1
Approver	Approval	USN-7	As an approver, I can review and approve or reject a network request.	Approval request is created and the configured approval outcome is captured.	High	Release-1
Network Fulfilment Team	Request Processing	USN-8	As a network fulfilment team member, I can use the centralized Network Database record to execute and track network changes.	The record contains the specified request and approval information.	High	Release-1
Relevant Stakeholders	Notifications	USN-9	As a relevant stakeholder, I can receive an email notification about request progress.	Send Email action sends the configured notification.	Medium	Release-1
IT Admin	Security	USN-10	As an IT admin, I can use configured ACLs to restrict read/write access to the custom table.	Default ACLs are applied to the custom table as specified.	Medium	Release-1
