|---------------|----------------------------------------------------|
| Date          | 09 September 2026                                  |
| Student Name  | Jetti Harika                                       |
| Project Name  | Automated Network Request Management in ServiceNow |
| Maximum Marks |                                                    |

| UAT ID | Scenario                                       | Acceptance Criteria                                                           | Result   |
|--------|------------------------------------------------|-------------------------------------------------------------------------------|----------|
| UAT-01 | Open Service Portal                            | Portal is accessible to the requester                                         | Accepted |
| UAT-02 | Locate Network Requests                        | Catalog item is searchable and opens correctly                                | Accepted |
| UAT-03 | Open the Network Request form                  | Catalog form loads with all configured variables                              | Accepted |
| UAT-04 | Select device type = Others                    | "Please specify" field becomes visible                                        | Accepted |
| UAT-05 | Select connection type = Existing              | Existing ID field becomes visible                                             | Accepted |
| UAT-06 | Submit request with mandatory fields completed | Network request record is created with a request number                       | Accepted |
| UAT-07 | Approval routing                               | Approval record is generated and linked via the Approval Request relationship | Accepted |
| UAT-08 | Automated notification                         | Requester receives an email notification on submission                        | Accepted |

### UAT Conclusion

The tested requester journey — from opening the Service Portal through catalog submission, conditional field behavior, approval routing, and notification — satisfies the documented acceptance criteria for the implemented scope of the Automated Network Request Management project.
